STRAUMANN® EMDOgain™
BEFORE IT’S TOO LATE

NEW
EMDOgain™ 015
DESIGNED TO REBUILD
“THE EMDOGAIN™ 015 SHOULD ENABLE THE CLINICIAN TO USE THE MATERIAL MORE OFTEN SINCE IT WILL BE MORE COST-EFFECTIVE WHEN ADDED TO BONE GRAFTING PROCEDURES.”

DR. DAVID COCHRAN
TOOTH PRESERVATION WITH STRAUMANN® EMDOGAIN™

Emdogain is now available in a new package size containing 5 syringes with 0.15 ml. This allows for a cost-effective treatment of smaller defects and soft tissue grafting procedures. The addition of Emdogain 015 to our regenerative portfolio enables the clinician to select the right amount of Emdogain for use with various bone grafting materials*, providing the patient with the potential for an enhanced outcome.

5–15% OF POPULATION SUFFERS FROM SEVERE PERIODONTITIS THAT MAY LEAD TO TOOTH LOSS¹,²

Periodontitis treatment involves controlling the causative bacteria and inflammation, as well as subsequent regeneration of the lost periodontal hard and soft tissues in order to regain tooth attachment.

Biological guided regeneration
Straumann Emdogain supports the predictable regeneration of the lost periodontal hard and soft tissue caused by periodontitis, helping to save and preserve the tooth.³

Applying Straumann Emdogain to the cleaned root surface of the periodontally diseased tooth helps to regenerate the periodontium, which includes the cementum, periodontal ligament and alveolar bone.⁴–⁸

Regenerative surgery with Straumann® Emdogain™

*Allograft, autograft, bone-derived xenograft, ß-TCP or bioactive glass
Straumann® Emdogain™ is indicated for:

1. Intrabony defects
2. Wide intrabony defects
   In combination with bone graft materials* in wide defects or where additional soft tissue support is needed.
3. Furcation defects
   (Class II Mandibular furcation)
4. Recession defects

*Allograft, autograft, bone-derived xenograft, ß-TCP or bioactive glass
The following steps describe how Straumann® Emdogain™ helps to regenerate the periodontium over time:

1. When Straumann® Emdogain™ is applied, the enamel matrix derived proteins precipitate on the root surface to form a matrix layer.

2. The matrix stimulates the attraction and proliferation of mesenchymal cells from the healthy part of the periodontium.

3. The cells secrete natural and specific cytokines and autocrine substances promoting the necessary proliferation.

4. Supporting cells are attracted and differentiate into cementoblasts which start with the formation of the cement matrix in which the periodontal fibers will be fixed.

5. The newly formed cement layer increases in thickness, extending the periodontal ligament.

6. Within months, the defect fills with newly formed periodontal ligament.

7. As the periodontal ligament is formed, new bone continues to develop.

8. Straumann® Emdogain™ facilitates the regeneration of the complex dental structure of the periodontium, building a new functional attachment.

“STRAUMANN EMDOGAINE STIMULATES THE REGENERATION OF BOTH THE HARD AND SOFT TISSUES OF THE PERIODONTIUM AT THE SAME TIME.”

DR. DAVID COCHRAN
Confidence thanks to predictable clinical results

- Improved clinical results when treating patients with intrabony defects compared to OFD alone
- Increased probability of complete root coverage achieved with a Coronally Advanced Flap (CAF) compared to CAF alone
- More than 400 clinical publications scientifically document results with Straumann® Emdogain™ to have predictable clinical results

Percentage of patients with highly significant outcome (CAL gain of >4 mm) 1 year post-operative in the treatment of intrabony defects

“Both the scientific evidence and my personal experience support that with the appropriate case, Straumann Emdogain significantly improves root coverage compared to the coronally advanced flap alone.”

Dr. Michael K. McGuire, DDS
MORE THAN 1 MILLION PATIENTS TREATED WORLDWIDE

Rely on long-term clinical experience

- Documented treatment success up to 10 years\textsuperscript{11,16}
- Improved attachment level maintained up to 5 years compared to baseline\textsuperscript{12}
- Improved probing depth level maintained up to 5 years compared to baseline\textsuperscript{12}

\begin{figure}[h]

\end{figure}

Added value for your practice due to patient satisfaction

- Clinicians reported on enhanced periodontal wound healing when using Straumann\textsuperscript{®} Emdogain\textsuperscript{™} compared to PGA carrier alone\textsuperscript{13}
- Less patients with pain and swelling compared to traditional Guided Tissue Regeneration (GTR)\textsuperscript{14}
- Designed to improve patient comfort compared to traditional OFD\textsuperscript{13}, GTR\textsuperscript{14} or connective tissue graft (CTG)\textsuperscript{15} alone
