

DEAR DENTAL PROFESSIONAL:

Of all the impressive changes that have had an impact on routine clinical practice, implant dentistry represents one of the most significant clinical developments that have benefited patients and practitioners. With this technology now entering the mainstream of oral health care, dentists and their patients are recognizing the opportunities and advantages of dental implants.

To complement our range of educational programs for restorative dentistry, we are pleased to announce that a Straumann Modular Interactive Learning program is now available throughout North America. SMILe™ is a unique and progressive dental implant training program providing step-by-step guidance in a collegial setting with focus and flexibility. SMILe is designed to provide dentists with straight forward restorative education for implant-supported restorative care.

The program is supported by a wide range of organizational tools designed to help you effectively execute your implant cases:

- SMILe Program Manual (Facilitator Guide, Curriculum Learning Topics, Interactive Development Activities)
- Straight Forward Restorative Education Multimedia DVD Series
- Restorative Hands-On Materials
- Patient Education

To learn more about this new education product, contact your Straumann representative to arrange for a SMILe™ information session.
